Subject: Sites Reservoir

CAUTION: This email originated from outside of the organization. Do not click links or open attachments unless you recognize the sender and know the content is safe.

The Sites Reservoir is another multi billion dollar boondoggle to reduce water flows into our bay and turn it into a dismal swamp.

The Sites Reservoir would divert additional water from the Sacramento River, which is a main tributary to the Delta and the South Bay. The Delta is already stressed because of existing diversions, and climate change is adding to that stress. It does not propose to divert water only during really wet years and extremely wet periods, but instead plans to divert water in most years, including averaging nearly 100,000 acre feet of water diversions in dry and critically dry years.

Significant diversions from the Sacramento River to fill Sites Reservoir could result in substantial impacts to our bay's ecosystem—reduced volume of water and water quality due to the inability to flush out runoff, Ag waste and municipal waste, increased temperatures, salinity, and harmful algal blooms (HABs).

Please do all you can to kill this project and spend none of my already too expensive water bill proceeds on any planning activities for the Sites Reservoir.
