FOR IMMEDIATE RELEASE

SCV Water Begins Construction of New Water Treatment Project in Valencia

Project Will Remove Perchlorate and VOCs and Restore Well 205 to Service

As part of SCV Water's ongoing commitment to ensuring local groundwater quality and reliability, the Agency recently began construction on a new treatment facility to remove perchlorate and volatile organic compounds (VOCs) at Well 205 in Valencia. Well 205 is located on Valencia Boulevard, west of the McBean Regional Transit Center, and was removed from service due to perchlorate and VOC detection in 2012.

Construction on the facility is ongoing and is anticipated to be complete in Winter 2025.

PROJECT DETAILS:

Construction Location:

- Well 205 is located just west of the McBean Regional Transit Center on Valencia Boulevard

Anticipated Completion: Winter 2025

Construction Hours: Monday through Friday during normal business hours

Impact: There are no planned water shutoffs or traffic impacts for this project.

Well 205 was constructed in 2000 but was taken offline in 2012 due to the detection of perchlorate and VOCs. The Well 205 Water Treatment Project will construct a new facility at the site that includes treatment vessels, a chemical building, a wash water tank and wash water pumps, enclosed by a block wall.

Trees will be planted around the facility to minimize views from the street and surrounding neighborhoods, and the facility is designed so the vessels emit no operational noise. When complete, the facility will restore the capability to pump enough water to serve the estimated demands of up to 5,000 households.

For any questions or concerns about this project, please contact SCV Water Senior Engineer Shadi Bader at sbader@scvwa.org.
