

WELL PRODUCTION AND WATER LEVELS

APRIL 2024

Contents:

- Map of SCV Water Wells
- Tables of Water Production by well, by month and by year (Current – 1987). These tables show current SCV Water wells and their historical production back to 1987. Production is measured in Acre-Feet of water pumped by each well. One Acre-Foot is equivalent to 325,851 gallons.
- Ground Water level graphs of the 44 wells currently in operation. Each well has two graphs. One that shows static water level depth below ground surface (bgs) from 1987 to the current month, and another showing levels only for the most recent five year period. Static Water Level refers to the level of water in a well under normal, non-pumping conditions. The graphs also show annual precipitation and historic high and low static water levels.

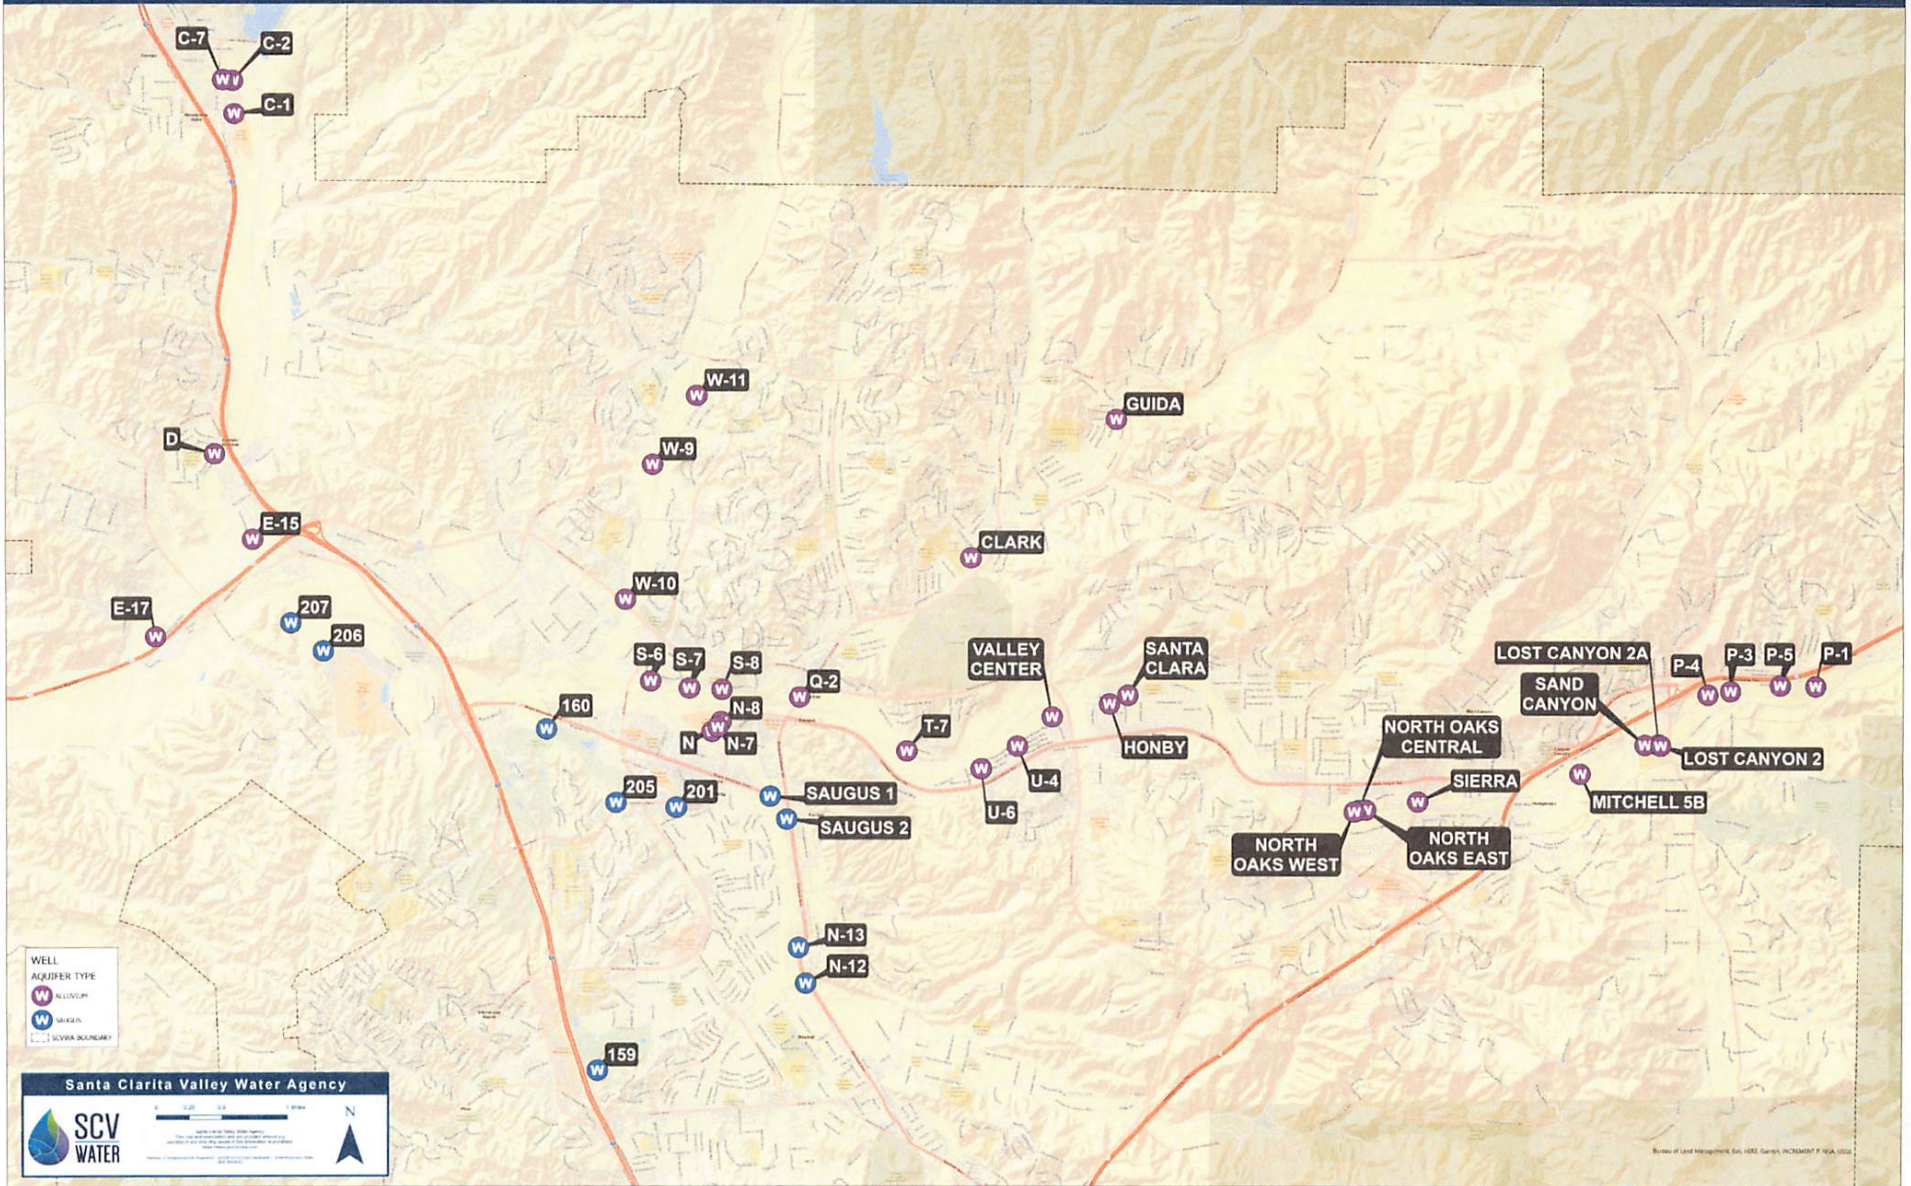

The water level and production data is measured monthly and these graphs and tables will be updated and posted monthly.

Note: Historical data labeled “NA” in the production table means that the particular well(s) were not in production at that time.

Also, leading data gaps in the graphs indicate time frame before well became ACTIVE. Other gaps may appear during periods when water level soundings were not completed.
